AMENDMENT TO THE CLAIMS

1.(Currently amended) A box-like enclosure for spatially orientable speakers, comprising: a molded body; a plurality of engagement elements formed at a peripheral region of said body during molding thereof; and anchoring cables for engaging with a first end thereof said engagement elements in order to allow different spatial orientations of the enclosure, wherein said body is monolithic and produced by molding so as to form an internal cavity for accommodating acoustic means and wherein said engagement elements comprise six engagement elements integrally molded with said body.

2. (Cancelled)

3.(Original) A box-like enclosure for spatially orientable speakers, comprising: a front cover and a rear cover which are coupled to each other in opposition, along front complementary peripheral edges thereof; connecting means for connecting said front and rear covers; recesses arranged at lateral faces of said front and rear covers; perimetric seats provided at said peripheral edges; engagement elements fixedly accommodated in said seats through coupling of said front and rear covers so as to protrude from said recesses; and anchoring cables for engaging with a first end thereof said engagement elements at said recesses, so as to allow different spatial orientations of the enclosure.

4.(Original) The enclosure of claim 3, wherein said perimetric seats consist of a slot formed along said peripheral edges.

5.(Original) The enclosure of claim 4, wherein said engagement elements consist of a frame which is accommodated in said slot.

6.(Original) The enclosure of claim 1, wherein each said first end of said cables is provided with a respective hook, which engages said engagement elements.

7.(Original) The enclosure of claim 6, wherein said cables are connectable at a second end thereof to environmental fixed supporting parts.

8.(Cancelled)

9.(Currently amended) The enclosure of claim 1, constituted by a front cover and a rear cover.

10.(Original) The enclosure of claim 9, wherein said front cover is provided with openings for sound radiation.

11.(Currently amended) The enclosure of claim 1, wherein said engagement elements are made of metallic material.

12.(Original) The enclosure of claim 1, wherein said enclosure is made of any of a plastic and a metallic material.

13.(New) A box-like enclosure for spatially orientable speakers, comprising: a molded body; a plurality of engagement elements formed at a peripheral region of said body during molding thereof; and anchoring cables for engaging with a first end thereof said engagement elements in order to allow different spatial orientations of the enclosure, wherein said body is monolithic and produced by molding so as to form an internal cavity for accommodating acoustic means, said engagement elements being molded integral with said body.
